

## **Using Video Modeling and Video Prompting to Teach Behavioral, Social, Academic and Functional Skills to Individuals with Disabilities**

**Presenter: Dr. Ryan Kellems, BYU Special Education Program Coordinator  
Counseling Psychology & Special Education**

Have you ever wanted to use the evidence-based practice of video modeling or video prompting with your child? Now is the perfect opportunity to learn about video modeling and how it could potentially benefit your child. This presentation will explain the different ways video modeling and video prompting can effectively be used as a means of teaching different transition related skills in home, school, community and work-based settings (for individuals with mild to moderate and severe disabilities). This webinar will focus on how video modeling is a great fit to be used by families. Participants will leave the webinar with a basic understanding of video modeling and video prompting. They will also receive ideas on how they can immediately implement it with those they work with via remote delivery options. The presentation will be tailored to parents and family members of individuals with disabilities.
